What watt charger for ipad

Apple USB power adapters

Apple USB power adapters and cables are included with many products and are available separately from Apple and authorized Apple resellers.

Customer safety is a top priority at Apple. That’s why all our products—including USB power adapters—undergo rigorous testing for safety and reliability and are designed to meet government safety standards around the world.

As part of our efforts to reach our environmental goals, iPhone models no longer include a power adapter in the box. iPhone continues to work with existing power adapters and USB-A to Lightning cables, such as those included in prior models. iPhone models now include in the box a newer USB-C to Lightning cable that supports fast charging and is compatible with USB-C power adapters and computer ports that you might already have. You can use either a USB-A to Lightning cable or the newer USB-C to Lightning cable with your iPhone. You can use any of the adapters listed below to charge your iPhone, iPad, Apple Watch, or iPod. You can also use a Mac USB-C Power Adapter or third-party adapters that comply with applicable safety standards. For more information about charging your iPhone, iPad, Apple Watch, or iPod, refer to the Safety, Handling, and Support section of the iPhone User Guide, iPad User Guide, Apple Watch User Guide, or iPod User Guide. Most iPhone models earlier than iPhone 11 came with a 5W power adapter in the box. These devices come with a 10W power adapter in the box: iPad Air 2 iPad Air iPad mini 4 iPad mini 3 iPad mini 2 iPad 2 These devices come with a 12W power adapter in the box: iPad Pro 12.9-inch (2nd generation) iPad Pro 12.9-inch (1st generation) iPad Pro (10.5-inch) iPad Pro (9.7-inch)* iPad Air (3rd generation)* iPad mini (5th generation)* iPad (7th generation)* iPad (6th generation)* iPad (5th generation)* * In some countries and regions, this model ships with the 10W power adapter. These devices come with an 18W power adapter in the box: iPad Pro 12.9 inch (4th generation) iPad Pro 12.9 inch (3rd generation) iPad Pro 11-inch (2nd generation) iPad Pro 11-inch The Apple 18W USB-C power adapter can fast charge your iPhone 8 or later. These devices come with a 20W power adapter in the box: iPad mini (6th generation) iPad (9th generation) iPad Pro 12.9-inch (5th generation) iPad Pro 11-inch (3rd generation) iPad (8th generation) iPad Air (4th generation) When an iOS or iPadOS device comes with an Apple USB power adapter, that adapter is certified to meet government safety standards in countries and regions where the device is available. Many of these countries and regions, including the United States, have adopted the Safety of Information Technology Equipment standard, IEC/UL 60950-1. Apple USB power adapters are designed for use with power sources rated to provide 100V AC to 240V AC at 50Hz to 60Hz. The Type A (flat parallel-blade design) Apple 5W USB, 18W, and 20W USB-C power adapters, as well as the 10W and 12W USB power adapters (with Type A AC plug attached) also comply with the IEC/UL 60950-1 and IEC/UL 62368-1 standards for use with power sources rated to provide 115V AC at 400Hz. Helpful? Thanks for your feedback. Flipkart Internet Private Limited, Buildings Alyssa, Begonia & Clove Embassy Tech Village, Outer Ring Road, Devarabeesanahalli Village, Bengaluru, 560103, Karnataka, India CIN : U51109KA2012PTC066107 Telephone: 1800 202 9898 NurPhoto/Getty Images It’s a common question: Your iPad and iPhone share the same connector, but their power adapters are different sizes and have different wattage ratings. Let’s say you’re on the go a lot, and you’d prefer not to lug around multiple adapters. Can you use the higher-wattage adapter on both devices?The short answer: Yes, you can. And if you want a faster charge, we encourage it. Apple explicitly approves of using its chargers across all devices that accept Lightning cables. That’s because modern electronics have systems to ensure they draw the appropriate amount of power—enough to charge quickly, but not too much that it’ll damage the device. At least not immediately. Anecdotally (and with confirmation from Apple), iOS devices charge much, much more quickly with a higher-watt wall brick. If you have an iPad Pro, and you charge it with the 29-watt MacBook USB-C charger, it’ll fuel up in half the time compared to the iPad’s included 12-watt charger. This content is imported from embed-name. You may be able to find the same content in another format, or you may be able to find more information, at their web site. The difference between either of those chargers and the 5-watt charger that comes with an iPhone will be just as dramatic. That’s because the difference between the iPhone and iPad adapters is the rated amperage. An iPad charge brick is rated to handle 2.1 amps, while the smaller iPhone charger is rated for just 1 amp. But the amperage rating is only a measure of the charger’s maximum capability. The actual amperage is determined by the load (i.e., the Pad or iPhone). According to Steve Sandler, founder and chief technical officer of the electronics analysis company AEI Systems, modern battery-powered electronics have a lot of complexity between the charger and the battery, including battery-charging circuits within the device and battery-protection circuits in the lithium-ion battery itself. These circuits are designed to manage the flow of electricity to the battery, and if the circuits inside the iPhone were designed to tolerate 1 amp, but are routinely exposed to 2 amps, that could stress the system over time. "Even though you may not instantaneously say, 'Wow, I just destroyed my battery!' you may limit its life over the long term," Sandler says, "but you wouldn't know for a year or more." Our advice: Since Apple claims compatibility between the iPad charger and iPhone, pay for AppleCare (it’s worth it for lots of reasons) and charge your devices with the biggest wall chargers you have. If your battery degrades severely after the first year, make Apple give you a new one.Now Watch This: This content is created and maintained by a third party, and imported onto this page to help users provide their email addresses. Smartphone charging is a part of most people’s daily routine, but it’s easy to forget to plug it in at night and be faced with the realization you only have half an hour to charge your device before you go for work. It’s even worse when this happens while you’re getting ready for a long night out. Thankfully, iPhone and Android users can take advantage of the fast charging mode that’s been available on smartphones for the past three or four years. The term fast charging may seem vague, but the results are real: Apple says its quick charge feature can refill up to 50% of an iPhone’s battery in 30 minutes. Other manufacturers are also catching on, offering fast-charging capabilities for their devices. But, to take advantage of this feature, you’re going to need a couple of accessories, which I’ll break down below. 1. A Fast Charging Power Adapter Amazon The most important accessory you need is a power adapter that can supply enough power to quick charge your device. A gadget’s maximum charging speed is generally determined by its size. Smartphones, including the iPhone and Google Pixel, have a maximum charging speed of 18W (watts) while larger devices like the iPad can quick charge at 30W. For reference, Apple includes a 5W power adapter with every iPhone except the iPhone 11 Pro and 11 Pro Max. It includes a 30W charger with its newest MacBook Air. I’m recommending Anker’s Nano II because it has a maximum power output of 30W, which means it can quick charge both small and larger devices, and charge some modern laptops. I’ve also had very good personal experiences with Anker’s charging accessories over the past seven years. The Nano II has one USB-C port on it, so you can plug an iPhone 11 Pro, iPad Pro, Android phone, or MacBook into it with the cable included in its box. If you use an iPhone or non-pro iPad, you’ll need a separate one. If you’d like to quick-charge multiple devices, or want a power adapter powerful enough to charge a 13-inch MacBook Pro, Anker’s Nano II has you covered. Buy: Anker Nano II at \$33.99 Note: If you only want to fast charge an iPhone or smartphone, Anker also has an 20W power adapter available on Amazon for \$19.99. 2. A Durable Charging Cable Amazon Tech companies always include a charging cable with their phone, but the ones they use aren’t always that great. They can crack and fray over time, which can make them dangerous to use. You can avoid that issue by investing in a set of durable charging cables. We recommend getting ones from Satechi, an accessory maker that offers both USB-C to Lightning (for iPhone) and USB-C to USB-C (for Android) cables. These cords are six feet long (most included cables are only three feet) and come in a nylon-braided jacket. We’ve had the opportunity to test these cords, and they’ve held up perfectly after months of daily use. We’re especially fond of their thicker connectors, which will prevent the cables from fringing at the ends. Buy: Satechi USB-C to Lightning Charging... at \$24.99 3. An Outlet With USB-PD Ports Courtesy AmazonAmazon If you want to quick-charge your devices, but don’t want to bother with carrying around a power adapter around your house, you can replace your traditional outlet with this one from Leviton. It has two standard plugs plus two USB-C PD ports, which each deliver up to 30W of power, so you can quick charge multiple devices at full speed. This is also enough power to charge a MacBook Air. The USB-C ports are spaced between the two standard plugs, so they won’t interfere with larger appliances (think toaster in the kitchen or table side lamp in the living room or kitchen), and look a lot more subtle than a power adapter jutting out of your wall. This outlet doesn’t require any special wiring or tools to be installed — just make sure to have a Phillips head or slotted screwdriver handy to remove screws holding the face plate and outlet into your walls. This is a relatively simple DIY project, but don’t attempt it if you feel uncomfortable doing any electrical work. It’s better to ask an electrician to do it rather than risking potential damage to your house. If you do take it on, be sure to cut the power to the room you’re using this outlet in before you get started to avoid electrocution. As someone who installed a few USB outlets a few years ago, I can highly recommend this home upgrade. I never have to worry about where my phone charger is, or whether I’ve brought the right cable. I just plug my device in, and watch it charge. Buy: Leviton Dual USB-C Outlet at \$50.25 4. A Battery Pack With USB-C PD Ports Raptic If you want to fast charge your iPhone, iPad, or Android phone, or extend the battery life of a USB-C enabled computer, you should get a battery pack with a USB-C PD port. These batteries will be larger than the pocket-sized one you probably have for your phone, but their higher capacity and fast-charging ability make it worth the size and weight. Many battery packs have a USB-C PD port on them, and claim to output 30W of power, but that’s kind of a misnomer. In many cases, these battery packs have three USB ports (mostly two USB-A and one USB-PD port) with a combined power output of 30W. Their USB-PD port has a maximum output of 18W, which can quick-charge a smartphone, but not an iPad. Plus, these batteries can’t power a laptop. If you want a fully capable portable battery pack with a quick charge feature, I recommend Raptic’s Titan Air. It has two USB-A ports and a USB-PD port with a combined output of 91W. Its USB-C PD port can output 45W of power, which is more than enough to quick charge your iPhone iPad, or Android device, and charge a laptop. It even has a full-sized standard outlet, which will allow you to use this battery pack to power small appliances. If you hook up the appropriate laptop charger to the Titan Air, you can charge your device at the full 91W. The one downside is that this battery pack weighs 2.3 pounds, so you’ll definitely feel it if you carry it around in a smaller bag. This isn’t a huge inconvenience given the power of this battery pack. Buy: Raptic Titan Air at \$99.99
